**SUNSCREEN FAQ**

**Q: Does Pink Hippo Sunscreen go on really "white"?**

A: Due to the concentration of zinc oxide, this sunscreen does go on white, but blends in smoothly once absorbed in the skin.

**Q: How often do I reapply and how much?**

A: The American Cancer Society recommends applying a generous amount early and often. Similar to most products, we recommend applying 30 minutes before sun exposure and re-applying every 90 minutes or more often if you are toweling off regularly. Also, consider protective clothing to help you stay sun safe!

**Q: What does it smell like?**

A: The essential oil blend has a light, pleasant and fresh scent. This is an all natural product, so you won't find heavily scented perfumes here.

**Q: Why Pink Hippo Sunscreen?**

A: Your typical sunscreens contain a combination of chemicals to reflect and scatter sun rays. Pink Hippo Sunscreen is just as effective without harmful chemicals, preservatives or harsh ingredients.
